

16-D DIAZO DUPLICATOR

The CMI 16-D Diazo Roll Duplicator has been specifically designed to be a low volume, table top unit. It is smaller than other systems and lighter in weight. The CMI 16-D is well suited for the service bureau or an in-office operation.

The CMI 16-D produces high resolution duplicates. The process permits you to duplicate low contrast masters so as to make higher quality duplicates. The diazo process is the most cost effective method of making duplicates.

The CMI 16-D has a unique developer system which uses aqueous ammonia. It eliminates the need to operate in a dark room. You will not need venting or plumbing. The CMI 16-D has a self-contained absorber.

The CMI 16-D has an exposure belt tension system which eliminates the possibility of double imaging.

The CMI 16-D has been sold for many years under the name of several other manufacturers.
